To Whom It May Concern:

Please allow me add my name to those providing letters of support for Mitchel Baugher. As Mr. Baugher's primary classroom instructor, I feel comfortable discussing his skills, aptitude and demeanor.

A quick review of his transcripts reveals his academic ability, but what is not shown is his ability to work and lead teams. He consistently was an important part of class discussions, asking probing questions and providing insights to fellow students. He was particularly helpful during mechanical ventilation labs, where he often would help fellow students with concepts as I spoke to other students.

Mr. Baugher's previous education has been helpful for him, especially in areas of physiology. He excelled in topics like pulmonary function testing and cardiovascular monitoring because of his background, but he also earned high grades in topics where he had less of an advantage from the outset. He is motivated to excel in every arena I have observed.

I can offer an enthusiastic and unequivocal endorsement of Mr. Baugher's knowledge, skills and attitude. He has every marker of an excellent caregiver and team member.

Please feel free to contact me if you have any questions.

Sincerely,

James R. Woods
