

## Stock Introduces Next Generation in Gravimetric Feeding

Chagrin Falls, Ohio February 11, 2010:

Stock Equipment Company, a member of the Schenck Process Group, is pleased to announce the release of the MULTIDOS® HPG Feeder, the next generation in Stock Equipment's long line of feeder models. This latest model incorporates two centuries of feeder experience as shared in a collaborative design effort with the Schenck Process Group. It meets or exceeds the requirements of traditional feeder users, but also incorporates standard features necessary for feeding PRB coal and alternative fuels.

Lead times are significantly reduced due to the modular design of the new feeder. Additional features key to the innovative and functional design include: a reversible inlet which can be rotated 180° to unload material into the new discharge outlet in the bottom of the feeder, a tension roll and active tracking station to maintain belt alignment, and rounded internal surfaces to avoid coal build-up which can become dangerous in PRB applications.

The MULTIDOS HPG Feeder is fitted with the new DISOCONT® Tersus (DT-9) Feeder controller with a graphical, touch-screen display and the latest microprocessor technology.

With over 9,000 installations worldwide, Stock's gravimetric feed systems are the global standard for accurate and reliable material weighing and feeding. This latest development in gravimetric feeding technology further solidifies Stock's leadership in the industry, providing state-of-the-art solutions for its customers.

Stock Equipment Company, a member of the Schenck Process Group, is a leading supplier of bulk solids material handling, feeding, weighing, screening, and automation solutions. Serving the power, mining, and process industries, Stock is the global leader in the supply of coal feed systems, valves and related microprocessor control systems for power plants.
