

## **Microsoft Features MEDSEEK in Case Study on Successful Implementation of Enterprise Project Management Tool**

### *Accelerated Project Delivery Increases Client Satisfaction*

Birmingham, Ala. ([PRWEB](#)) August 23, 2008 -- MEDSEEK, a leading provider of enterprise portal management solutions for more than 600 healthcare organizations, was recently featured in a case study by Microsoft on the addition of Microsoft's Enterprise Project Management 2007 (EPM) tool. MEDSEEK implemented the tool to have more consistent product and project deployments across the organization.

In 2006, MEDSEEK experienced significant growth with its acquisition of another company, AccessPT. As projects increased in number and complexity, project managers were unable to have a comprehensive view into resources, schedules and status. To solve this problem, MEDSEEK teamed with Project Hosts to implement an on-demand Microsoft® Office Enterprise Project Management (EPM) Solution.

"We have received positive feedback from our clients based on our ability to meet delivery commitments as a direct result of implementing the Microsoft tool, refining our processes and the evolution of our project management office," said Peter Kuhn, President of MEDSEEK. "We are confident that as we move forward our clients will continue to receive an enhanced level of service and on-time 'go live' dates for their projects," added Kuhn.
