Mr. Mehdi Aminrad

MAKING KNOWLEDGE WORK

Mehdi Aminrad was a student on the MSc course in Financial Engineering and Knowledge Management in the School of Engineering, Design & Technology at the University of Bradford, UK. He commenced the course in September 2005 and graduated with a Distinction in December 2006, having completed the course on time in September 2006.

I was Mehdi's MSc project supervisor, the project was entitled "Automated barcode system for student registration and attendance tracking". He was a most diligent student, and worked consistently hard to develop his project work in line with the plan that we agreed at the start of the project. His work was always completed on time, and each stage was written up comprehensively and submitted for my comment and feedback. Such comment and feedback was then considered and incorporated where appropriate into the finished dissertation. It was a pleasure to supervise Mehdi in his MSc project. He showed great enthusiasm for the topic, and followed up every idea and discussion.

Mehdi's enthusiasm and academic ability was also evident in his module assessments. Very good marks in the taught modules, together with his outstanding project dissertation, meant that his Distinction was well earned.

Mehdi was a polite and pleasant student and ranks among the best MSc students I have supervised in my 21 years as an academic at the University of Bradford. I fully recommend him to you.
