Project Statement

The client for my proposed project is an online school that focuses on offering Associates and Bachelors degrees. Miller-Motte College has 42 campuses nationwide. The online division is branched off the Wilmington, NC campus. The Online division offers 6 Associates degrees and 4 Bachelors degrees. The admissions team, student service coordinators, and part of the career service team is located in Tempe Arizona. Academics, financial aide, and the rest of the career services team is located in Wilmington, NC. To be accepted into the school a student must provide proof of graduation and pass the Wonderlic with a 13 or higher.

The instructional need of the school is for an online orientation for new students. The orientation should cover the basic expectations of students, how to perform basic tasks in Moodle, and discuss plagiarism and netiquette. The need for this was discovered when students were talking to their student services coordinators and did not know how to perform the basic functions in Moodle. To meet this need I intend to develop a self paced training module for students to learn the basic functions needed to help them be successful in their education.
