

700 MHz integration, P25 compliancy, PSIC Grant, IP conversion, interoperability, and hurricanes keeping you awake at night? Let Agiosat show you how your communications network can overcome these challenges.

Agiosat Global Communication's 2007 Interoperability Express Comes to IACP!!

The Interoperability Express features a REAL-TIME, OPERATING demonstration of 700 MHz interoperability featuring systems from leading communication solution providers including Agiosat Global Communications. Join us in our railcar to experience demonstrations that feature currently available solutions supporting:

- Backhauling traffic from repeater sites, freeing additional capacity while providing continuity during disasters
- Providing State-wide interoperable networks covering an entire state or region
- Ensuring continuity of the current communication infrastructure with disaster-proof systems integrated tightly into state and local systems
- Replacing damaged, or overtaxed communication infrastructure, and filling gaps with portable systems that easily integrate and supplement state and local communication systems

While you are seeing these interactive, real-time demonstrations, enjoy the refreshments in the comfort of our railcar. We are located at the New Orleans Public Belt private railcar siding 10 minutes from the convention center. Just get on the Riverside Streetcar which has stations right behind the convention center (by the Riverwalk Stairway or the Cruise Ship Terminal) and the Hilton. Take the streetcar north to the Esplanade Station (end of the line), and we are 50 feet north.

Our demonstration hours are:

Sunday October 14 10:30am-3:30pm
5:00pm-9:00pm

Monday October 15 12 noon-3:30pm

Tuesday October 16 12 noon-3:30pm

(Additional ours by arrangement)

(Rain or shine, the demo is covered)

To make an appointment for a private demonstration, call 818-526-1700 or email: express07@agiosat.com
