

To Whom It May Concern,

I am a French new IT graduate who just finished his final internship in Long Island, New York. I am currently looking for a post dealing with business and software development processes modeling as well as the network infrastructures design, deployment and integration.

The variety found in this scope of work makes me very interested in it and ready to offer you my creativity and energy. As it is the perfect opportunity for me to gain a valuable experience in Business Process Management and Systems Integration, I am convinced I have the qualities required for the job.

First of all, the communication skills I acquired during my final internship allowed me to become fluent in English and to interact easily with colleagues and customers, coping with team work and business tasks.

In this cooperative environment, I also had the chance to handle the mobility, responsibilities and technical polyvalence involved in this function by dealing with a lot of troubleshooting on different platforms and infrastructures, on site or from the headquarters of the company.

This rich scope of work and my previous experience in Web development made me familiar with the software development cycle issues. Moreover, working on the company business processes and its document management system brought me an overall vision of the roles and mechanisms thanks to which a company works. I am now ready to enrich this new-acquired understanding.

After reading the enclosed details, you may find that I am the person you are searching for and I would welcome the chance for us to work together.

I look forward to hearing from you.

Yours faithfully,

Joseph Rozencwajg.

PS: Please be aware a visa will be required for me to work in the United States. A program exists for new graduates to obtain a J-1 visa once they are sponsored by a company. I stay open to any discussion and proposition regarding this matter.
